

ADENA SPRINGS NORTH

11 June 2007

To Whom It May Concern:

Re: Sligo Bay:Baby Zip '05 Colt

On 9 June, 2007, I examined this individual. At this time there was no indication of lameness. Physical examination revealed a slight enlargement of proximal (upper) one-third of the superficial digital flexor tendon of the right forelimb. Ultrasound evaluation revealed minor enlargement of this area with no lesion in the tendon structure. In my opinion, this finding is related to immaturity and growth. As such, it should not affect future racing soundness. It is my recommendation to be conservative in management of this individual for the next 60 – 90 days.
